The challenges confronting the electricity systems in the Western Interconnection are considerable: weather extremes, electrification, decarbonization, and developing electricity markets, to name a few. Yet, the goals remain the same: assured reliability, enhanced resilience and improving regionality. This Western version of the Northwestern University Electricity Dialogue, by bringing together regulators, thought leaders, and industry executives together in a small-group, deep dive setting, discusses these challenges and goals with the hopes of illuminate what is going on, how they can be addressed and achieved and enrich the ongoing efforts.
